

Nimbus Cloud Storage — Product Documentation

Overview

Nimbus Cloud Storage is a fictional object storage service used here for RAG testing purposes. It offers three pricing tiers: Starter, Pro, and Enterprise. The Starter tier includes 50 GB of storage and costs \$4.99 per month. The Pro tier includes 500 GB of storage and costs \$19.99 per month. The Enterprise tier includes 5 TB of storage and costs \$149.00 per month, billed annually.

Data Redundancy

All tiers replicate data across a minimum of 3 geographically separate data centers. The Enterprise tier additionally offers a 4th replica in a customer-chosen region at no extra cost. Nimbus guarantees 99.95% uptime for Pro and Enterprise tiers, and 99.5% uptime for the Starter tier.

File Size Limits

The maximum individual file size is 5 GB on the Starter tier, 50 GB on the Pro tier, and 5 TB on the Enterprise tier. Files larger than these limits must be uploaded using the Multipart Upload API, which splits files into chunks of up to 100 MB each.

Support Response Times

Starter tier customers receive email support with a target first-response time of 48 business hours. Pro tier customers receive a target first-response time of 8 business hours. Enterprise customers are assigned a dedicated support engineer with a guaranteed first-response time of 1 hour, 24/7.

Data Retention After Cancellation

If a subscription is cancelled, Nimbus retains customer data for 30 days before permanent deletion. During this window, data can be restored by reactivating the same plan tier. After 30 days, deleted data is not recoverable under any circumstances.

API Rate Limits

The REST API allows 100 requests per minute on the Starter tier, 1,000 requests per minute on the Pro tier, and 10,000 requests per minute on the Enterprise tier. Exceeding the limit returns an HTTP 429 status code and the client must wait 60 seconds before retrying.
